

**“THE FOXXHOLE WILL ALWAYS LET YOU DOWN,
YOU CAN COUNT ON IT”**

TIME Magazine 2002 Best New Invention

The FoxxHole™ system is a technically innovative fire resistant escape chute, offering a superior means of worker evacuation from racking boards and work platforms as high as 76m (250'). While in use, the FoxxHole™ system safeguards the evacuee from fire, heat, smoke, fluids and small flying debris from all directions.

The design provides for incredibly confident, rapid, passive descent that transport's the evacuee away from the danger zone. Regardless of body size, shape, weight or physical condition, it requires nothing from the user nor anyone else to operate. In the event of a high angle rescue a basket stretcher may be lowered through the chute. It is quick to set up & tear down, and its flexibility allows it to be deployed in virtually any direction on-site. Most importantly, there are NO moving parts to malfunction. These qualities make the FoxxHole™ evacuation system the premier choice of the demanding and hostile environment of the energy industry.
